

2011 Report on Planned Parenthood Facilities In the United States

Released March 14, 2012

American Life League

P.O. Box 1350

Stafford, VA 22555

2011 Report on Planned Parenthood Facilities In the United States

By Robert Gasper, Senior Research Analyst, American Life League

SUMMARY:

Facilities – Measuring by number of facilities, Planned Parenthood Federation of America (PPFA) closed 47 clinics while opening 11, marking the sixth straight year of facility decline. Planned Parenthood is now reporting a total of 749 clinics, which is lower than the total number of clinics reported when American Life League's STOPP project began operations in 1985.

Abortion –In 2011, PPFA reported 322 facilities committing surgical and/or medical abortions. Of those, 166 facilities offered both surgical and medical abortion, while 152 offered medical abortions, but not surgical. Four clinics reported offering only surgical abortions. The percentage of Planned Parenthood clinics committing surgical and/or medical abortion increased from 41percent in 2010 to 43percent in 2011.

METHODOLOGY:

Methods – The data was collected from a variety of resources. The researchers used the national web site of Planned Parenthood Federation of America as well as web sites of local Planned Parenthood affiliates. In addition, information was received from individuals and organizations across the country. Where any questions arose or any of the data sources gave conflicting information, phone calls were made to individual Planned Parenthood clinic sites to determine the accurate data.

Clinic count – While conducting this survey, we encountered a number of locations where Planned Parenthood claimed more than one clinic at the same physical address. This most frequently happened when PP was separating its abortion business from the rest of its services. In all cases where more than one clinic was listed at the same physical address, we counted it as one clinic.

Completion date – It is recognized that the status of Planned Parenthood facilities is a fluid one. New clinics open, old clinics close and specific services at facilities change on a regular basis. Hence, this report is a snapshot at a point in time. The data collection efforts were done over a 90-day period and were completed on January 30, 2012, and the data in this report reflects the situation as of that day.

Discussion

All in all, 2011 was a remarkable year in the fight against Planned Parenthood. Planned Parenthood has long projected an aura of invincibility, especially on the national level. However, Planned Parenthood was left scrambling when the US House of Representatives voted to deny federal funding to the abortion giant. It was only by the direct action of President Obama, who threatened to shut down the entire government rather than allow any monies to be denied to Planned Parenthood, that enabled Planned Parenthood to retain federal funding. Furthermore, a series of scandals involving Planned Parenthood clinics showing an apparent willingness to offer aid and support to child sex traffickers gained national attention after a number of video recorded stings were released by the pro-life group Live Action.

On the local level, nine states passed legislation to defund Planned Parenthood. Texas defunding efforts directly resulted in the closing of 16 Planned Parenthood facilities. Pro-life legislation in Arizona caused at least seven facilities to cease offering surgical and medical abortions. These efforts combined with continued pressure from STOPP's education outreach project and direct action from informed citizens led to another year of decline for Planned Parenthood Federation of America.

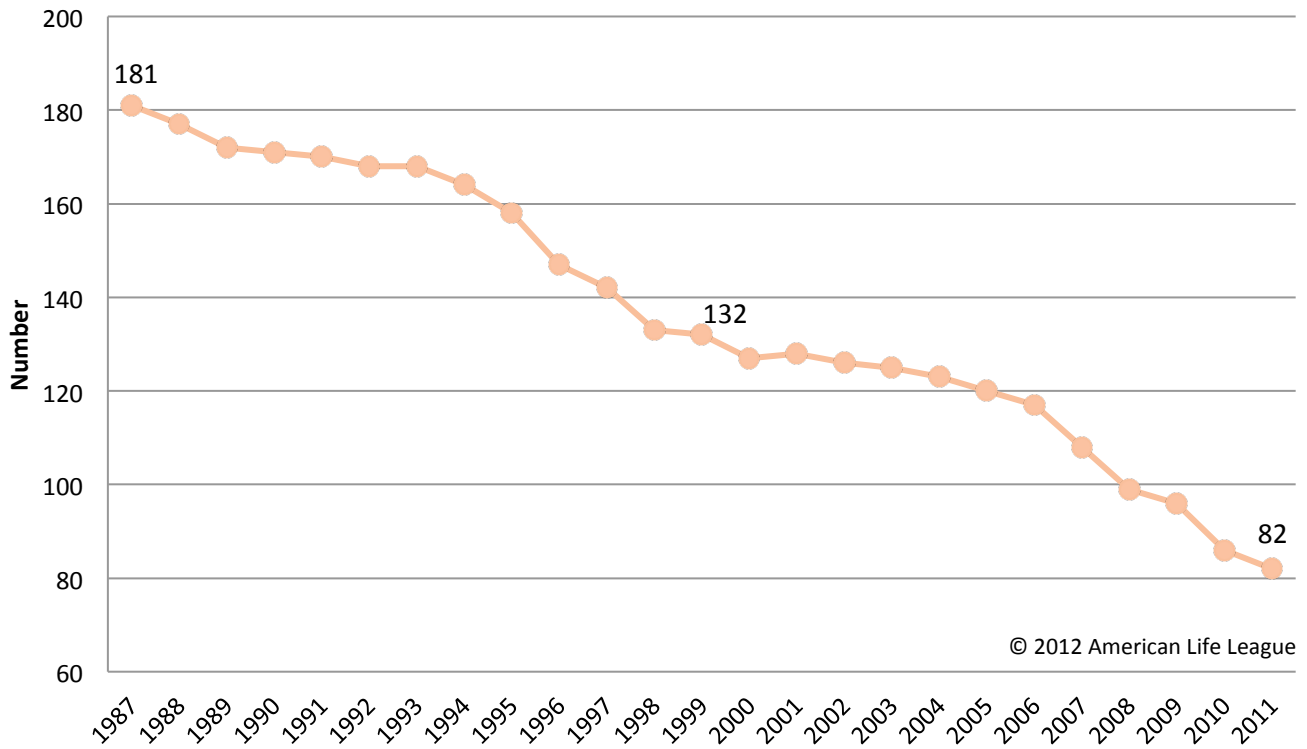

Table #1 – Planned Parenthood Clinics and Affiliates by Year

Planned Parenthood Federation of America has its national headquarters in New York City. The Federation is comprised of separately incorporated affiliates across the country. Each affiliate must adhere to standards of affiliation as created by the national office, pay dues to the national office (approximately one percent of its gross income), and participate in nationwide insurance and volume purchasing agreements.

The national office does not operate any clinics. All clinics are operated by the affiliates. The table below shows, by year, the number of affiliates and the total number of clinics operated by Planned Parenthood in the 50 states and District of Columbia. Numbers prior to 2003 are taken directly from PPFA Annual Reports. Beginning in 2003, numbers are from our own surveys.

YEAR	tot # clinics	# of Affiliates
1983	700	190
1984	735	186
1985	763	
1986	791	
1987	816	181
1988	850	177
1989	879	172
1990	879	171
1991	911	170
1992	922	168
1993	922	168
1994	915	164
1995	938	158
1996	900	147
1997	900	142
1998	850	133
1999	850	132
2000	875	127
2001	875	128
2002	875	126
2003	866	125
2004	849	123
2005	872	120
2006	859	117
2007	855	108
2008	844	99
2009	817	96
2010	785	86
2011	749	82

Number of Planned Parenthood Affiliates

Planned Parenthood's trend of SHUTTING DOWN its clinics since 1995

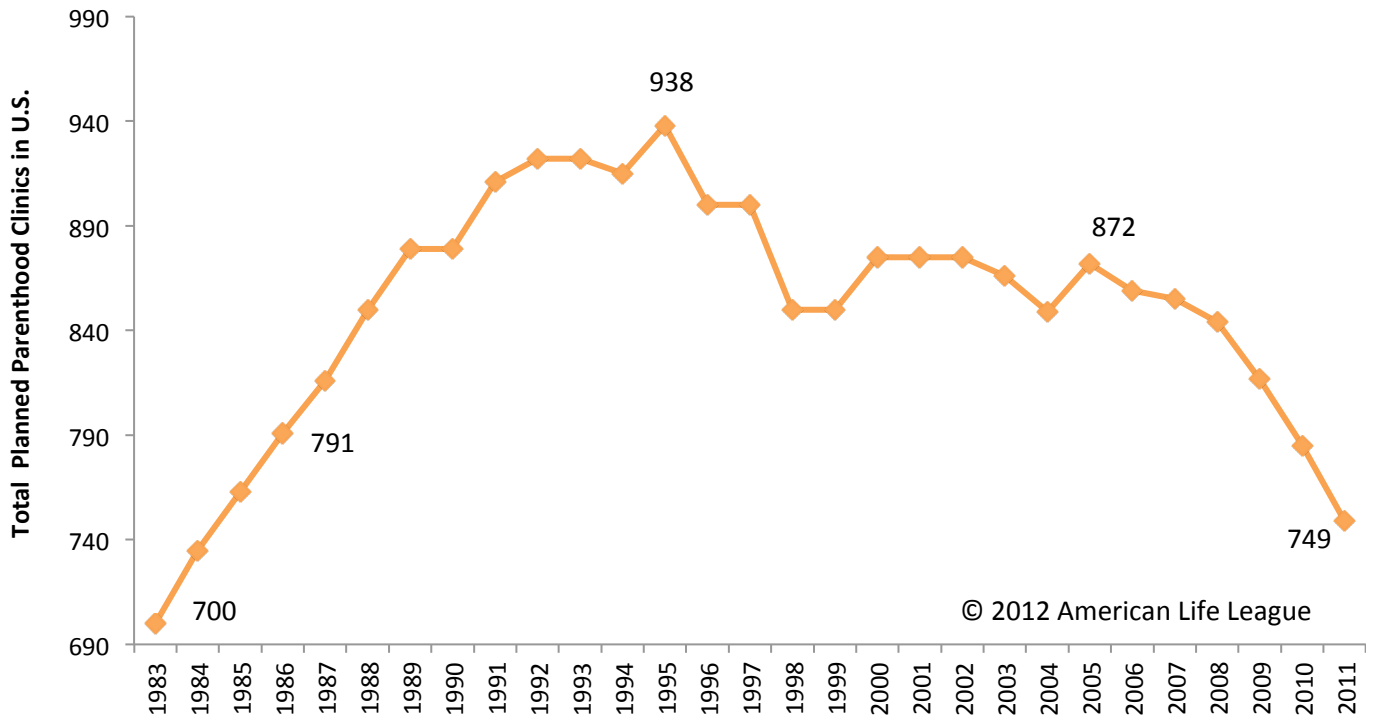

Table #2 – PPFA Surgical and Medical Abortion Facilities

There are three types of abortions routinely offered at Planned Parenthood facilities across the country: chemical, medical and surgical. These types are defined as:

Chemical abortions – drugs or devices that end the life of a human being in the womb by preventing implantation. Although PPFA refuses to call these abortions, it does admit that many products it sells act, some of the time, by preventing implantation. These products include the morning after pill, the low dose and mini oral contraceptives, the patch, the injectables, and more.

Medical abortions – abortions caused by administering a drug to the woman up to seven weeks after implantation to end the life of a human being in the womb. There are a number of drugs used including mifepristone, methotrexate and misoprostol. Many people still refer to these drugs by the research name of RU-486.

Surgical abortions – abortions that are performed with various types of instruments and/or use invasive procedures to enter the woman’s uterus and directly kill the human being. Under current United States law, these abortions can occur at any time while the human being is, at least partially, in the womb.

Chart 1 – 2011 Planned Parenthood Abortion Methods Offered by Type Compared to Total Number of Facilities

Chemical	749/749	100.00%
Medical	318/749	42.45%
Surgical	170/749	22.69%

Planned Parenthood Surgical vs. Medical Abortion

Year	Surgical Abortion Facilities (most also do medical)	Medical Abortion Facilities (no surgical abortions)	Total
2005	172	57	229
2006	172	60	232
2007	179	108	287
2008	174	121	295
2009	173	131	304
2010	165	156	321
2011	170	152	322
